

Alexey Elizarov

Building with TypeScript, React, Next.js

agent-cv.dev/beautyfree · [GitHub](#) · [t.me/devall](#)

SUMMARY

Full-stack engineer who builds and ships real products. Has worked across mobile apps, crypto infrastructure, AI tools, and developer tooling.

The developer has a diverse career spanning over 14 years, transitioning from PHP to Rust, JavaScript, and TypeScript. They have built projects in various domains including frontend development, blockchain/web3 applications, mobile app development, backend services, AI/ML, CLI tools, infrastructure setup, and Rust/systems programming.

SKILLS

Full-stack web development Crypto wallet infrastructure Shipping solo from idea to production

Expert in real-time data processing Strong problem-solving skills Adaptable across different domains

OVERVIEW

309 projects 46,543 commits 2020–2026 active Languages: JavaScript, TypeScript, Rust, YAML, HTML, Swift

PROJECTS

2026

The developer worked on various projects across different domains including frontend, backend, and AI/ML, focusing on tools and platforms for developers and AI agents.

mcp-linear

2025–2026 · 133

TypeScript, GraphQL, Express, Zod, Dotenv

MCP Linear is an open-source server that implements the Model Context Protocol (MCP) for the Linear GraphQL API, enabling AI assistants to interact with Linear project management systems.

<https://github.com/tacticlaunch/mcp-linear>

english-learn

2026

Next.js, React, Drizzle ORM, Postgres, Tailwind CSS

English-learn is an interactive English-learning platform that provides a comprehensive learning experience with real examples and exercises, including lessons, situations, quizzes, and voice conversations with AI tutors.

screen-studio

2025–2026

TypeScript, React, MobX, styled-components, Pixi.js

This project is a detailed reproduction of Screen Studio, a macOS screen recording app, focusing on maintaining and porting its features to modern technologies.

cursor-window-activate-hook

2026 · 27

TypeScript, AppleScript (macOS), xdotool (Linux), wmctrl (Linux), PowerShell (Windows)

The cursor-activate-hook is a cross-platform tool that automatically activates the Cursor window and brings it to the foreground after each AI agent response, saving and restoring the active window before and after submitting prompts.

<https://github.com/beautyfree/cursor-window-activate-hook>

skiller

2026 · 18

JavaScript, TypeScript, React, Electron, Tailwind CSS

Skinner is a cross-platform desktop app that enables users to manage AI agent skills across various coding environments like Claude Code, Codex, Gemini CLI, and GitHub Copilot. It provides a centralized dashboard for installing, syncing, and editing skills, streamlining the process of maintaining and deploying skills.

<https://github.com/beautyfree/skinner-desktop-skills-manager>

2025

This developer worked on various projects across multiple domains including backend, frontend, AI/ML, mobile, CLI tools, Rust/systems, infrastructure, games/graphics, crypto/web3. They focused on developing robust and efficient solutions for social media management, authentication applications, API services, and educational content platforms.

cursor-bank

2025 · 205

Commander, Debug, FS-Extra, Simple-Git

Cursor Memory Bank enhances AI assistance by maintaining persistent documentation between sessions, addressing session memory limitations.

<https://github.com/tacticlaunch/cursor-memory-bank>

my-react-telegram-web-app

2025

React, TypeScript, @amplitude/analytics-browser, @radix-ui/react-dialog, @tanstack/react-query

This Telegram Mini App engages users to complete tasks and earn points for benefits.

auth-app

2025

React, TypeScript, Vite, @turnkey/sdk-browser, Tailwind CSS

This project offers a web-based authentication application that enables users to log in using Apple OAuth and email verification. It leverages Turnkey services for secure key management and OTP generation.

ethereum

2025

TypeScript, Tailwind CSS, Prettier, Husky, Commitlint

This project is an API service for a Ref App that focuses on Ethereum yield management and reward systems.

argocd-apps

2025

Helm, Kubernetes, ArgoCD

This repository manages ArgoCD applications and their Helm charts, providing a centralized platform for deploying and managing Kubernetes resources.

2024

The developer worked on a variety of projects across different domains including backend services, frontend applications, and AI/ML solutions. They focused on building APIs, dApps, and infrastructure components.

keyapp-swap-api

2024

JavaScript, Express, @solana/web3.js, @project-serum/anchor, @opentelemetry/api

Keyapp Swap API is a backend service for facilitating token swaps and related operations within the Keyapp ecosystem. It leverages Solana's program anchoring patterns to ensure secure and efficient transactions.

keyapp-swap-api

2024

TypeScript, Express, @solana/web3.js, Zod, @opentelemetry/sdk-trace-node

This project provides an API for Keyapp Swap, a decentralized exchange platform, using Solana and its ecosystem.

ethereum

2024

TypeScript, GCP Cloud Functions, PostgreSQL

This project provides a user authentication and registration service for Ethereum-based applications using TypeScript with GCP Cloud Functions and PostgreSQL.

referral-dapp

2024

TypeScript, React, Solana Web3.js, PostCSS, Tailwind CSS

This project is a referral dApp built using Solana and React, focusing on user authentication, wallet integration, and real-time data fetching.

ethereum

2024

TypeScript, Vite, Prettier, Tailwind CSS

This project aggregates yield strategies for Ethereum and provides a framework for managing them.

2023

The developer worked on various projects across multiple domains, including Rust, TypeScript, JavaScript, and backend technologies like Fastify, Express.js, and PostgreSQL. They focused on building APIs, dApps, and infrastructure solutions.

dwidget

2023 · 1

TypeScript

This project provides templates and scripts for creating Ethereum dapps and widgets using TypeScript and Node.js. It includes tools for deploying smart contracts and integrating with various blockchain APIs.

<ssh://git@github.com/ethereum-app/dwidget>

keyapp-payment-api

2023

Rust, Tokio, PostgreSQL, Swagger

This project provides an API for a KeyApp Paymene Service, focusing on features such as client IP extraction, on-ramp/off-ramp/kyc pushes, and currency exchange functionality.

p2p-wallet-helm-charts

2023

Helm, ArgoCD, Kubernetes, PostgreSQL, Redis

This repository automates Kubernetes deployments using GitOps practices with ArgoCD and Helm charts for a P2P wallet application.

devall-Solana-Q1-2023

2023

Rust, Solana, Markdown

This monorepo serves as a comprehensive learning resource for students in the WBA Solana cohort, providing structured code challenges and journals to help them grasp foundational concepts and best practices in building on the Solana blockchain.

<https://github.com/Web3-Builders-Alliance/devall-Solana-Q1-2023>

vault_manager

2023

TypeScript, React, Vite, Chromium extensions

Vault Manager is a Chrome extension that allows users to connect their wallets and interact with Ethereum-based dApps using Etherian as an injected provider.

2022

The developer worked on various projects across different domains including frontend development, blockchain/web3 applications, mobile app development, backend services, AI/ML, CLI tools, infrastructure setup, and Rust/systems programming. They demonstrated expertise in React, Solidity, TypeScript, JavaScript, Solana, Anchor, and other related technologies.

p2p-wallet-web

2022 · 76

JavaScript, React, Solana, ProjectSerum

A browser-based Solana wallet prototype that allows users to create and manage wallets, send/receive SOL tokens and Wrapped tokens, and explore various features like transaction history and security.

<https://github.com/p2p-org/p2p-wallet-web>

celo-margin

2021–2022 · 1

Solidity, Hardhat, Ethers.js, Uniswap V2 Router

This project is a Margin trading dApp on Celo using Ubeswap and Moola flashloans. It provides users with a platform to trade cryptocurrencies and leverage their assets.

<https://github.com/solaris-protocol/celo-margin>

solaris-automations-ui

2022 · 1

React, TypeScript, @ant-design/pro-layout, @emotion/react, @emotion/styled

This project is a user interface for Solaris Protocol's automation tools, providing developers with a platform to interact and manage their automated strategies.

<https://github.com/solaris-protocol/solaris-automations-ui>

wedding

2022

Next.js, Linaria, React, Polished, Ramda

This Next.js project is a wedding invitation generator with features like customizable designs and QR codes for easy sharing.

<https://github.com/beautyfree/wedding>

eth-automations-ui

2022

React, TypeScript, Styled Components, Web3.js, ECharts

This project provides a user interface for automating Ethereum transactions using the Solaris Protocol.

2021

The developer worked on developing the Solaris UI, which is a user interface for interacting with the Solaris lending and borrowing protocol on the Solana blockchain.

solaris-ui

2021 · 5

React, TypeScript, Ant Design, Solana Web3.js, Pyth Network

Solaris UI is a user interface for interacting with the Solaris lending and borrowing protocol on Solana blockchain. It provides tools for users to manage their assets and transactions.

<https://github.com/solaris-protocol/solaris-ui>
